Project Title: Online Shopping Management

Abstract :

The “Online Shopping Management” system application enables vendors to set up online shops, customers to browse through the shops, and a system administrator to approve and reject requests for new shops and maintain lists of shop categories. Also on the agenda is designing an online shopping site to manage the items in the shop and also help customers purchase them online without having to visit the shop physically. Our online shopping mall will use the internet as the sole method for selling goods to its consumers. The consumer will be in complete control of his/her shopping experience by using the “unique storefront” concept. Shopping will be highly personalized and the mall will provide lower prices than most competitors. This, in brief, is a description of our product which will showcase a complete shopping experience in a small package.

Hardware Requirement:

CPU: Minimum: Intel Pentium – IV series or equivalent AMD, (2.4 GHz or higher, dual core minimum), Hard disk: 320 GB or above with mirroring capability, RAM: 512 MB or above, Operating System Server: Windows 2000 Server or Higher, Internet Connection: 300kbps (Recommended) or above, Keyboard or Pointing Device, Processor: 1GHz or above.

Software Requirement:

Dreamweaver (11.0), Phpmyadmin (1.7.7), MySQL (5.0), Independent from OS. Magento Commerce (1.7.0.2), Php (5.3.8).

Project Application:

1. People even with less technology knowledge can operate this system.
2. This system save the valuable time of the customer.
